Aequa Network
An Engine for
Fair Sequencing &
Value Redirection on L2

We are a modular DVT engine moving Layer 2s from value extraction to value creation.

Our Differentiators

- Strategic Go-to-Market: Two-phase "Trojan Horse" strategy that upgrades existing sequencers and activates fairness without disruption.
- Superior Technology: Combines BEAST-MEV privacy, DFBA fair ordering and a modular Generic Payload Interface.
- Radically Transparent & Battle-Tested: M4 complete codebase is open-source and continuously hardened by fuzz testing and chaos engineering.

The Problem

- Nearly all L2s rely on centralized sequencers, creating single points of failure and a multi-billion MEV market.
- Shared sequencers demand a risky "heart transplant," stalling adoption and sacrificing sovereignty.

Our Solution

- Plug in a DVT engine to upgrade existing sequencers into fault-tolerant networks.
- Activate fair sequencing through pre-consensus auctions and BEAST-MEV encryption.

Our Vision: Building the Core Economic Engine for the L2 Ecosystem

MEV is not a problem to be "solved" but a resource to be harnessed. Current L2s leak value to a handful of actors. Aequa captures and redirects it back to users, LPs and applications, pioneering Fairness-as-a-Service.

Traction & Proof
- M4 Complete: Fully-featured Go-based DVT engine implemented.
- Battle-Tested: Continuous fuzz testing and chaos engineering.
- Open Source: Public repo at github.com/zmlAEQ/Aequa-network

Roadmap
- Phase 1: Core DVT Engine (Completed) – Onboarding initial L2 partners with high-availability DVT.
- Phase 2: Privacy Activation (Q4 2025) – Roll out BEAST-MEV encryption as a software upgrade.
- Phase 3: Fairness Activation (Q1 2026) – Launch DFBA solver network and on-chain auction.
- Phase 4: Economy Launch (Q2 2026) – Deploy the $EQS token and MEV Redistribution engine.

The Team
- Ziming Liu: Founder & Core Architect – focused on distributed consensus and P2P networks with deep consensus expertise.

The Ask
$1.8M Seed Round
- Team Expansion (40%) – Senior L2 engineer to accelerate testnet & integrations.
- Security Audits (25%) – Audits by Trail of Bits, Sigma Prime, etc.
- Legal & Operations (15%) – Establish legal entity & prepare token issuance.
- Ecosystem & Community Growth (20%) – Testnet incentives, developer grants & community building.
